BeachTech[®]
professional beach cleaning

The small all-rounder...

The newly engineered BeachTech *Sweepy hydro*, with its hydrostatic drive, is ideal for cleaning and leveling small beaches, volleyball courts and other sandy areas. The new hydrostatic concept makes it easy to operate and provides optimum maneuverability for easy access beneath sunshades and between deck chairs. With a wide range of accessory equipment, the range of operation for this compact machine extends way beyond the beach!

The two shaking screens, working in opposing action, minimize the vibration, while maximizing a thorough cleaning even when the sand is wet. Deep cleaning is always possible in dry sand and the new BeachTech *Sweepy hydro* will remove cigarette butts, broken glass, pieces of wood, soda cans, pebbles etc. from the sand surface. The BeachTech *Sweepy hydro* can be turned around on the spot and also has a reverse gear.

The new BeachTech *Sweepy hydro* is the right machine for professional beach cleaning even in tough conditions: The deep-set center of gravity and sturdy construction help make the BeachTech *Sweepy hydro* a reliable, low-wear machine which requires minimal maintenance. The speed is continuously adjustable via a rotary handle. Turning around is simple thanks to the hydrostatic steering with safety stop. The large container is emptied and cleaned out quickly. All operations are easy and your investment is effective and economic.

SWEEPY^{hydro}

...for perfectly clean beaches and much more.

BeachTech Sweepy hydro – add-on equipment

From the beach into the park, due to its modular quick-change system, this compact beach cleaning machine is a truly multifunctional tool. Just a few easy steps and in no time at all it can be used as a road sweeper, leaf vacuum, snow blower etc. The BeachTech Sweepy hydro is much more than a beach cleaner and is perfect for multiple uses, even if you are not located near the beach! This makes the BeachTech Sweepy hydro efficient and economic and a great choice to accomplish multiple tasks.

Technical data

Maximum operating width:	1,050 mm
Maximum surface cleaning capacity:	4,200 m ² /h
Operating depth up to:	120 mm
Length of vehicle:	2,650 mm
Width of vehicle:	1,195 mm
Height of vehicle (adjustable):	from approx. 1,000 to 1,600 mm
Engine:	air-cooled, 9.1 HP / 6.7 kW 4-stroke gasoline engine
Drive:	infinitely adjustable (forward and reverse)
Transmission:	hydrostatic
Steering / control:	entirely hydrostatic
Max. speed:	6.5 km/h
Cleaning equipment:	quick-change system; exchangeable double screens with 2 different mesh sizes
Collecting container capacity:	44 litres, extricable
Overall container volume:	80 litres
Corrosion protection:	aluminium, fiberglass, cathodic coating of steel parts
Modular quick-change system:	for swift installation of the various add-on equipment

Sweeper

operating width: 1,000 mm

Front transport bin: 140 liter capacity, easy to operate tilting device, 2 large pneumatic tires

Spreader for fertilizer, sand or road salt

100 l, spreading direction adjustable (left-center-right)

Snowblower

two-stage

Front scraper

operating width: 1,000 mm, with spring guard and replaceable scraping slat

Garden vacuum

operating width: 800 mm, 2 wheels, adjustable in height, collecting bag 270 l
